Profile

Software Developer with expertise in Backend development, Test automation, Frontend and AI/ML. Skilled in Java, SpringBoot, React, Angular, Selenium, Python, Flask Jenkins and AWS, with a track record of delivering scalable, automated solutions, full-stack bugs including Springboot and Angular and React using Adobe Experience Manager and improving deployment efficiency.

EDUCATION

Vishwakarma Institute Of Technology, *B.Tech-Computer Engineering*
8.92 CGPA

Jun 2020 – Jun 2024

WORK EXPERIENCE

Barclays (BGSC) , *FullStack Developer, BA4 - (Insurance team)*
Graduate Developer, BA4, BA3 - (Billing team)

Jul 2024 – Present

- Enhanced Angular, React, and Spring Boot applications by delivering new features and implementing DB2 connectivity using NPA remediation password-less authentication solutions for secure and compliant enterprise access.
- Designed and implemented secure Java Spring Boot APIs for third-party provider integrations through Barclays internal proxy and TIAA drop-off workflows, ensuring secure traffic routing, SSL validation, and reliable API communication.
- Migrated 10+ Spring Boot microservices from Java 8 to Java 21 using Test-Driven Development (TDD).
- Built and automated the GPP Validation Framework using Java 17, reducing operational processing time from 40 days to 8 days through workflow automation, optimized validations, and streamlined execution pipelines.
- Developed and optimized Oracle DB database tables and user preference modules, improving application stability, personalization capabilities, and efficient cross-enterprise data management.
- Engineered and integrated 3 scalable automation testing frameworks using Selenium, BrowserStack, and Cucumber, covering 1000+ UI, Web, and API test cases; integrated execution into Jenkins CI/CD pipelines with automated reporting, reducing manual QA effort by 80% and accelerating release validation cycles.

Transvision Solutions, *ML and Backend intern*

Oct 2023 – Mar 2024

- Engineered API endpoints using flask and machine learning algorithms for KYC verification, fraud detection, and negativeneeds monitoring, achieving 95% accuracy in identifying fraudulent profiles.
- Engineered a high-performance system employing LRU caching algorithm and parallel processing techniques, accelerating data retrieval speeds by 60% and reducing latency in critical financial compliance workflows.
- Deployed containerized solutions using Docker on Amazon EC2, integrated with S3 for secure data storage, and automated workflows using AWS Lambda jobs, ensuring scalable, reliable, and production-grade deployments.

SKILLS

Languages: Java, Springboot, React, Angular, C/C++, Python, SQL, Git/GitHub, Cucumber, JavaScript, Adobe Experience Manager

TechStack: Jenkins, Spring MVC, IOC, AOP, JDBC, Maven, Selenium, Browserstack, MS-SQL, Flask, Fast API, Lombok, JUnit, GitLab, AEM, MongoDB, Insomnia, Generative AI, Machine Learning, Docker, AWS S3, AWS Lambda, EC2

PROJECTS

AI-Powered Change Impact Analyzer (RiskIQ.AI) , *Barclays Reimagined Hackathon*

- Built an AI-driven tool to automate change impact analysis using Azure OpenAI, Groq AI, LangChain, and Pinecone.
- Implemented risk scoring, effort estimation, and AI-based justifications for smarter decision-making.
- Developed backend with Flask and real-time alerts via Power Automate; designed an intuitive web UI for stakeholder.
- Enabled semantic search on structured data (e.g., reports, stakeholders, requirements) using RAG architecture for contextual responses and better insights.

Achievement

Flipkart Grid 5.0 Hackathon , *Semi-Finalist*

Only team from college to reach semi-finals (top 50) among 1000+ teams to register in the event.

Barclays GenAI Hackathon 2.0 

Secured 3rd place out of 77 teams across 5 panels in Barclays' internal Global GenAI Hackathon 2.0.

Barclays ReimaginedAI Hackathon 

Built an AI-Powered Change Impact Analyzer (RiskIQ.AI) during Barclays' internal ReimaginedAI Hackathon, leveraging Azure OpenAI, Databricks, Power Automate, and Flask APIs.
